URANIUM ISOCONCENTRATION CONTOUR MAP Upper Chinle

Homestake 2013 Annual Report

 Well to consider for additional testing

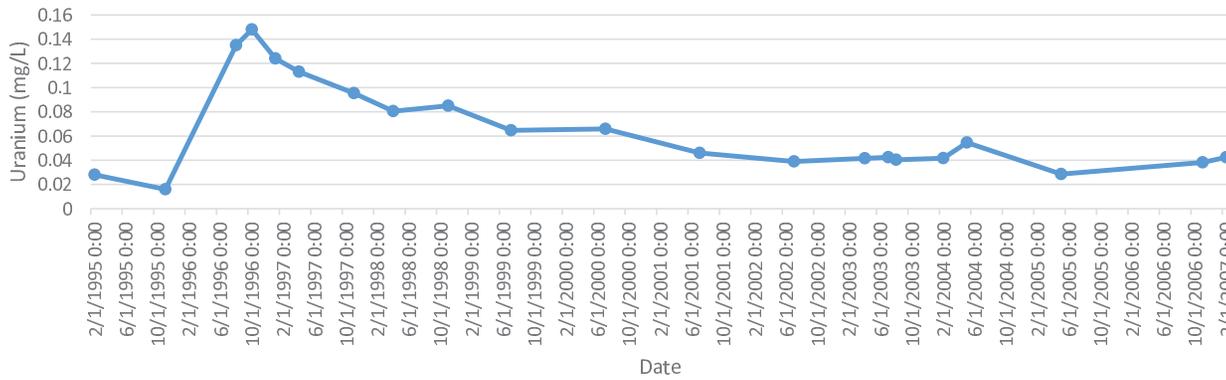

WELLS CONSIDERED FOR ADDITIONAL TESTING UPPER CHINLE

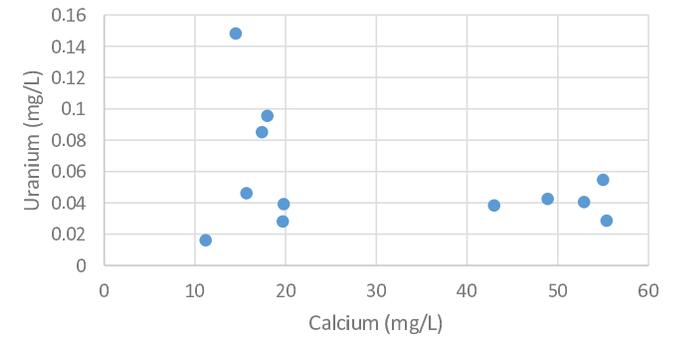

- High Calcium – Low Uranium
 - CW50 – Mixing Zone, Not Impacted?
 - Uranium level increased to about 300 ppb in 2013; possible impact from HMC operations
- High Calcium – High Uranium
 - CE7 – Mixing Zone, Impacted
 - Extraction Well
- Low Calcium – Low Uranium
 - CW18 – Non Mixing Zone, Impacted?
 - Uranium levels increased in 1996; appears to be impacted by HMC Operations
 - Water levels varied over 100 feet between 2003 and 2014; impacted from HMC operations
- Low Calcium – High Uranium

CALCIUM ISOCONCENTRATION CONTOUR MAP

Middle Chinle Aquifer

1985-87

 Uranium >200 ppb

DRAFT – FOR DISCUSSION PURPOSES ONLY

WELLS CONSIDERED FOR ADDITIONAL TESTING MIDDLE CHINLE?

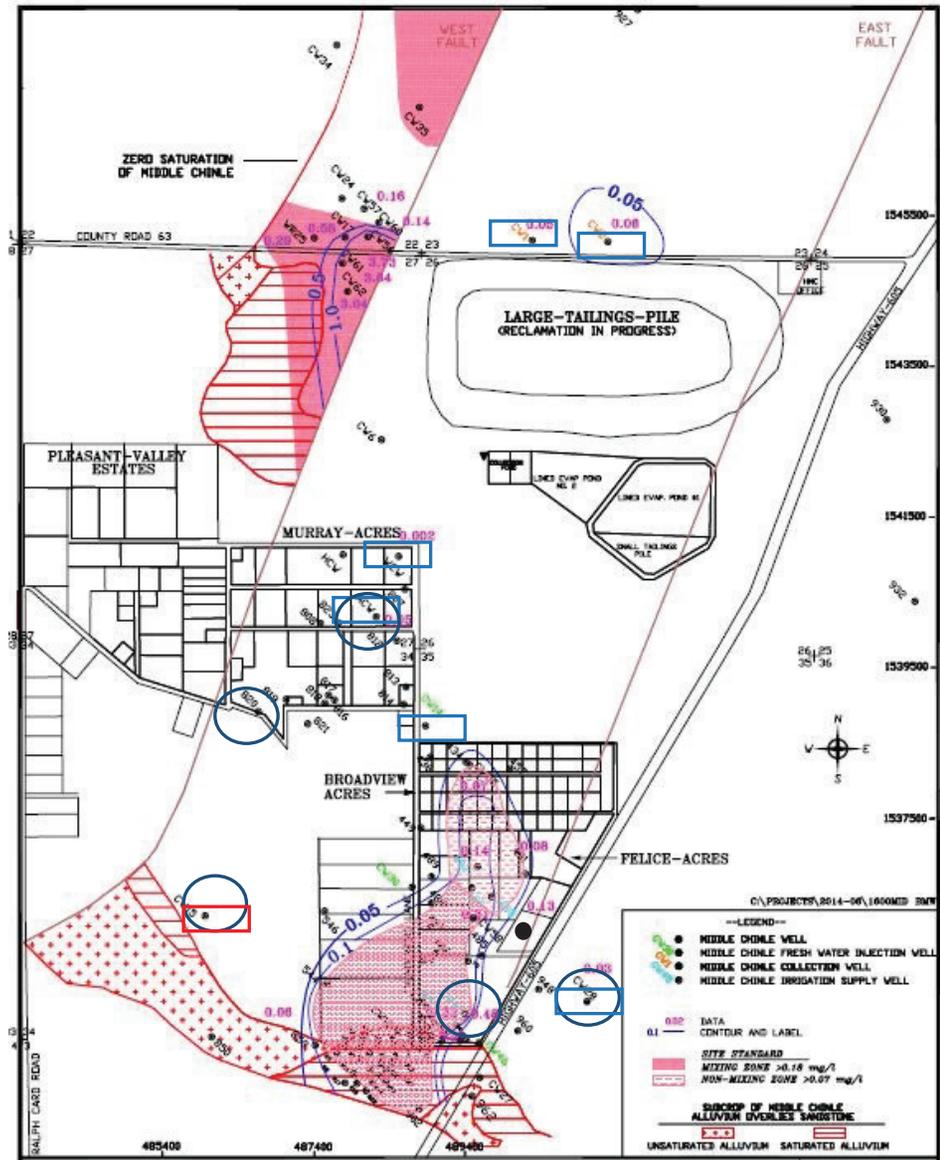

- High Calcium – Low Uranium
 - CW15 – Mixing Zone, Not Impacted?
 - 820 – Mixing Zone, Not Impacted?
- Low Calcium – Low Uranium
 - AWC – Non Mixing Zone, Not Impacted?
 - CW28 – Non Mixing Zone, Impacted?
 - Uranium levels increase from <20 ppm to 80 ppb from 1996 to 2003; appears to be impact from HMC operations
- High Calcium – High Uranium
 - CW45 – Mixing Zone, Impacted
 - Irrigation Supply Well
- Low Calcium – High Uranium
 - 484 – Mixing Zone, Impacted
 - Along East Fault
